

Physical Therapy Hoist

Problem

Early recovery and rehabilitation can improve functions of stroke patients and help them to recover quickly and prevent further complications. However, many patients do not have the ability to pay the costs of additional rehabilitation at home.

Solution

- Can support the stroke patients to rehab easier at home with greater cost efficiency
- Physical therapy: improves mobility and balance.
- Exercises to strengthen muscles.

Installation Guide

- Can be hung or fixed on a strong device that can withstand a tensile strength weight of 150 kg.
- Can support a working weight of not more than 50 kg per side
- Adjust the rope position to suit the user.
- Optional accessories can be installed to provide support for targeted areas of muscle weakness as needed

Benefits

- Help to increase access to physical therapy in underserved, remote areas
- Patients can use independently without the support of the physical therapist to continue rehabilitation at home
- Convenient to install and carry
- Cost effective
